Feedback from course co-ordinator

The course evaluation demonstrates that the course components (seminars, break-out discussions, assignment, student presentations) and the course pace (intensive) are well received and appreciated. The students mention benefitting from the topics included in the course. In the next edition of the course, onsite presence will be considered. However, the main reason for having "all remote" mode was to accommodate the equal ground for all students, including remote ones.

I would like to see a course related to data visualisation in academic papers. I think this is an important skill that is often overlooked.

Courses related to AI tools supporting research (for example chatgpt). 10 years from now I believe generative ai will play a significant part in assisting/enhancing modern research and it would be valuable to learn how to use it properly and be prepared for this shift.
